

# EXPOBAR CARAT ECO

## ENERGY EFFICIENT

With technical innovations we have lowered the power consumption with more than 50%. There has never been a purer cup of passion.

## PERFECT MILK

Get perfectly foamed milk in just a touch of a button. Just set the temperature and let the turbo steamer do the rest.

## AESTHETIC DESIGN

Innovative design and high-class finishing touches. Carat is available in two standard colours

# CARAT ECO

With innovative design and technology we have created an eye-catching machine with genuine quality. Being one of the market's most energy efficient espresso machines the Carat is fully adapted to modern environmental requirements as well as each and everyone's interest in a clean and healthy lifestyle – enjoy a cup of Pure Passion.

Carat automatically learns how you use it and it adapts its energy consumption after that. In this way the machine is always ready when you need it and when you are not using the machine is automatically switching to energy saving mode. Good for both the environment and your wallet.

Using

50%

less energy

Saving

370 €

each year

Reducing CO<sub>2</sub>

745 kg

each year

Carat machine with energy saving features has been compared to an identical Carat machine without energy saving features. The energy consumption has been measured from both machines in accordance to the EVA-EMP 3.0 protocol. A comparison has been made assuming that the machine is used 7 days a week all year round for 9 hours a day. The remaining time of the day the first machine is left on and the other one is allowed to enter energy saving mode. The cost savings has been calculated based on an price of electricity of 0,18 €/kWh (including all sub charges and taxes). Source: Eurostat. The CO2 savings have been calculated based on a CO2 emission of 362 g/kWh (EU-27 average) Source: The European Environment Agency (EEA).

## TURBO STEAMER

Turbo steamer is an automatic milk foamer with a system for foaming milk at the touch of a button. The temperature is programmable from the display and the frothing stops automatically when desired temperature is reached. The turbo steamer is very reliable and gives a consistent result thanks to an air injection system powered by a pump whose speed is controlled electronically. The work load decreases as it is both convenient and simple to use. These are the characteristics which makes it stand out from the other milk foamers on the market.
